Subsea Internet of Things

- Agenda

- About WFS Technologies
- Seatooth Technology
- What is the Subsea Internet of Things?
- Applications:
 - Asset Integrity
 - Flow Assurance
- Summary

Seatooth PipeLogger

- Smart, Wireless Pipeline Temperature Logger

About WFS Technologies

- Background

- Founded Edinburgh, Scotland in 2003
- Privately owned
- Head office Edinburgh, Scotland
 - Sales/Projects offices in Houston, Vietnam
- World leader in radio based subsea wireless automation
- Seatooth radio technology developed in-house
 - >200 man-years of research
- >7000 Seatooth products delivered
- WFS Oil & Gas
 - Asset Integrity Solutions
 - Flow Assurance solutions
 - IRM
- WFS Defense
 - Diver wireless Personal Area Networks (wPAN)
 - AUV communications and docking

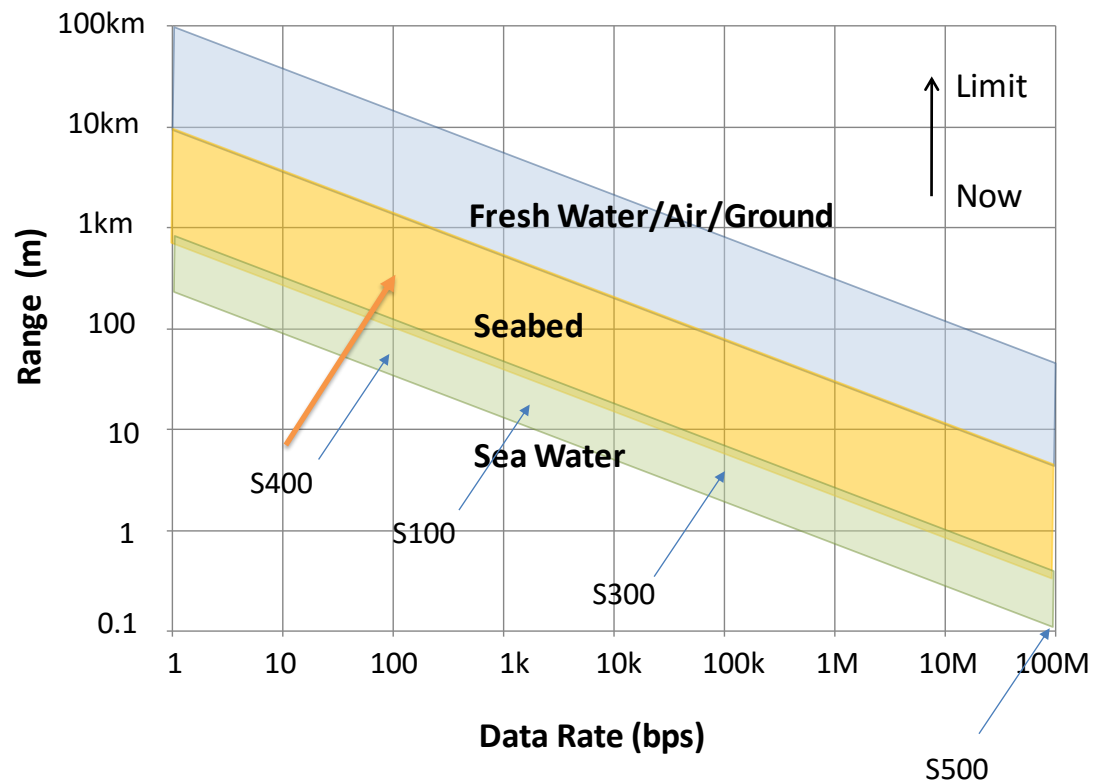

WFS Headquarters, nr Edinburgh, Scotland

Seatooth Wireless Network

About WFS Technologies

- Seetooth Technology

Radio finds path of least resistance

- Seetooth: radio communications

- Media: water, water/air boundary, seabed, ice, metal
- Attenuation is a function of frequency & conductivity
 - $\approx 55\text{dB}/\lambda$ in seawater
- Propagation velocity is a function of frequency:
 - $\approx 100\times$ velocity of sound at 3kHz in seawater

- Propagation loss through water/air boundary $\approx 3\text{dB}$
- Unaffected by turbidity, biofouling, aeration, thermal layers, engine noise
- Ultra low power receive technology key to deployments of 10 years +

Seatooth Video

- Total, Laggan Tormore

Subsea Wireless

- Comparison of options

- Complementary wireless technologies
 - Acoustic
 - Radio
 - optical
- There is no 'silver bullet'
- Select technology that best matches application
- Future of subsea wireless is *Hybrid*

Subsea Wireless Group

	Pros	Cons
Acoustic	<ul style="list-style-type: none">• Proven technology• Range: up to 20 km• Energy Efficiency at longer ranges• Precision navigation	<ul style="list-style-type: none">• Adversely affected by<ul style="list-style-type: none">- Water aeration- Ambient noise- Multi-path in shallow water• Unpredictable propagation• Limited bandwidth• High latency• Impact on marine life• Does not transit water/air
RF	<ul style="list-style-type: none">• Unaffected by water depth• Unaffected by turbidity/bubbles• Non-line-of-sight performance• 'omni-directional'• Rapid set-up• Low latency• Immune to acoustic noise• Immune to marine fouling• Up to 100 Mbps• Transits water/air & water/seabed	<ul style="list-style-type: none">• Limited range through water• Low energy efficiency at longer ranges• Susceptible to in-band EMI
Free Space Optical	<ul style="list-style-type: none">• Ultra-high bandwidth: Gbps• Compact• Low latency• Immune to acoustic & EMI noise	<ul style="list-style-type: none">• Susceptible to turbidity & particles• Marine fouling on lens faces• Line-of-sight• Needs tight alignment• Short range• Difficulty transiting water/air

SWiG is an open standards JIP feeding into API 17F

What is the Subsea Internet of Things?

- **Subsea Internet of Things:**
is a network of smart, wireless sensors and devices configured to provide performance, condition and diagnostic information

What is the Subsea Internet of Things?

- *Smart Devices*

Seatooth® Flow Assurance (FA) PipeLogger

- Multi-parameter sensor
 - Asset Integrity: Temp, UT, CP, Vibration
 - Flow Assurance: Temp, Flow, Vibration
- Local data processing
- Local process model correction
- Intelligent power management
- Local power generation

What is the Subsea Internet of Things?

- Wireless

- *Wireless = Hybrid incorporating wireless*
 - Hard wired
 - Copper
 - Fibre optic
 - Wireless
 - Radio
 - Acoustic
 - Free space optics
- Select the most appropriate technology
 - Cost
 - Resilience
 - Performance
 - Flexibility

Subsea Umbilical

Seatooth Radio modem

Acoustic modem

What is the Subsea Internet of Things?

- Information

- Smart devices process data to deliver information
 - derived values, control outputs, graphs, histograms,
- Information v data
 - **Data** are the facts or details from which **information** is derived. Individual pieces of data are rarely useful alone. For data to become information, data needs to be put into context.
- Why **Information**?
 - Reduced cost
 - Extended life
 - Increase resilience
 - Distributed control

Convert data to Information

- **Asset Integrity**

- Field-wide Cathodic Protection (CP)
- Pipe wall thickness (UT)
- Crack (ACFM)
- Vibration
- Impressed Current (ICCP)
- Flow induced pulsation (FLIP)
- Riser fatigue
- Completion fatigue
- Mooring fatigue
- Leak detection

- **Production Optimisation & Flow Assurance**

- EOR water/gas injection
- Hydrate/wax
- Chemical injection
- Slug management

Subsea Internet of Things

- Asset Integrity

CP Inspection Automation

- Reduce inspection costs
- Improve quality of information
- Flexibility to extend sensor network

- ➔ extend interval between inspection
- ➔ location, timeliness, reliability, frequency
- ➔ subsea wireless SCADA

Pipeline Corrosion Monitoring with PIG

- Use PIG as 'AUV on tram tracks' to harvest data from remote sensors
- Seatooth PigTracker supports low bandwidth, 2-way comms through up to 50mm steel
- WFS solution
 - Smart sensor on outside of pipe takes periodic readings (eg UT, temp, flow, vibration)
 - Local data processing
 - Data harvested by PIG
- Benefits
 - Reduced OPEX: vessel time
 - Improved quality of information
 - Improved safety

Subsea Internet of Things

- Asset Integrity

FIV/VIV/Free-Span Monitoring

- Reduce data monitoring costs
 - Improve reliability of data collection
 - Flexibility to extend sensor network
- ➔ extend interval between battery swap-outs
 - ➔ verify system performance without recovering logger
 - ➔ subsea wireless SCADA

Subsea Internet of Things

- *Flow Assurance*

EOR Water/Gas Injection Control

- Increase production
- Extend reservoir life
- Solution
 - Retrofit wireless network of smart flow meters
 - Implement control strategy

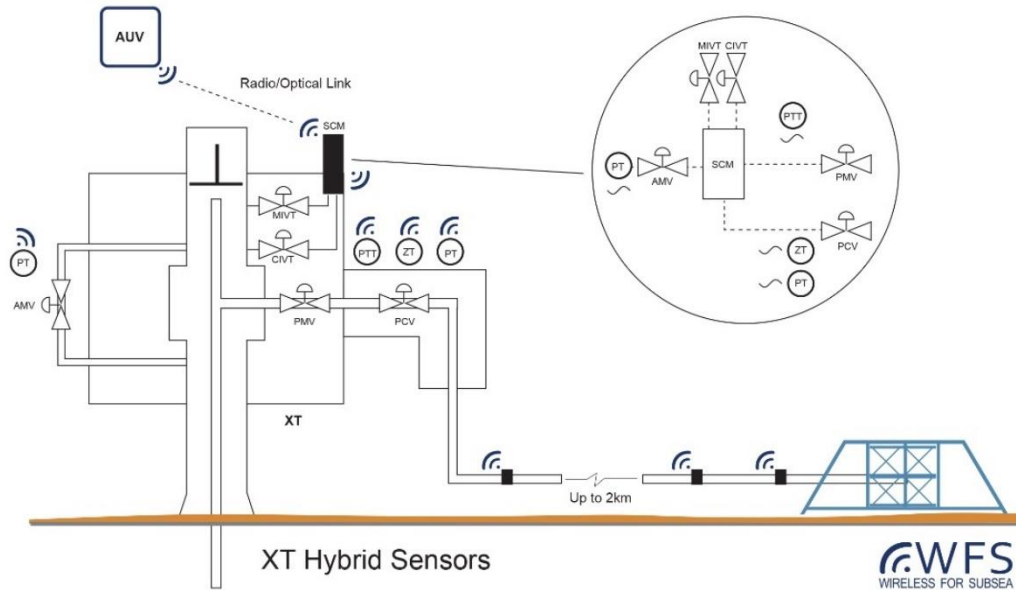

Seatooth® Water/Gas Injection Optimisation WFS WIRELESS FOR SUBSEA

Subsea Internet of Things

- Production Control

- Reduced CAPEX
 - Increased reliability
 - Increased flexibility
- ➔ lower electrical load, reduced installation cost
 - ➔ fewer connectors and jumpers
 - ➔ futureproof control system expansion

- Subsea Internet of Things

- Hybrid architecture
- Smart wireless sensors
- Local data processing and control
- Seamless extension of wireless through splash zone

- Benefits

- Increase production
- Reduce CAPEX
- Reduce OPEX

Seatooth® Asset Integrity Management (AIM) PipeLogger
