

SUT Technical Evening
Wednesday 14th February 2018

IMR Vessels and Technology Current & Future Trends - APAC Region

IMR Vessels and Technology
Current & Future Trends
APAC Region

Agenda

- DOF Subsea Introduction

Current Trends

Future Trends

IMR Vessels

- IMR Vessel Current Trends
- MPSV Vessel Current Trends

- IMR Vessels of the Future

Current Technology

- FPSO Mooring Repair Trends
- AUV Pipeline Inspection

- FPSO Mooring Repair Trends
- Single Pass AUV with Non-Contact CP
- Hover Mode AUV's
- IMR Data Analysis

IMR Vessels and Technology – What's Trending Today

IMR Vessel Current Trends – Vessel Toolkit

Skandi Hercules – Heavy IMR Vessel

Skandi Singapore - Dive Support Vessel

Geoholm – Light IMR Vessel

Skandi Darwin MPSV
(Shell Australia)

Skandi Hawk MPSV
(Shell Malampaya)

Current Technology

Pipeline Inspection Current Trends

- Single Pass Pipeline Inspection
- Improved Data Quality
- Cost effective without impacting integrity management
- Streamlined Database Deliverables

AUV Pipeline Inspection

AUV Single Pass Data

AUV vs ROV Pipeline Inspection

ROV

- 0.5 knots or ~22 km/day
- **1 Pass**
- Acquisition = ~109 hrs (4.5 days)

AUV

- 3.7 knots or ~100 km/day
- **1 Pass**
- Acquisition = ~20 hrs (1 day)

KP 0

Pipeline

KP 100

FPSO Mooring Repairs Current Trends

- ACCD Subsea Connection Tool
- Live Field (Uninterrupted Production)
- 'Like for Like' Replacement
- Adaptable to suit project specific requirements

Future Technology

FPSO Mooring Repair Future Trends

- Increased Mooring Capacity > 300-400Te
- Subsea Handshakes (connecting moorings for anchor/pile replacement)
- Cross Tensioning
- Pipeline Walking Anchors

AUV Technology – Future Trends

- Non Contact CP
- CH₄ (Methane Sniffer) – leak detection
- Laser Imagery – Micro Bathymetry
- Hover Capability
- Permanent In-field

IMR Vessel of the Future

IMR Vessels – Future Trends

Skandi Gamma

- Dual Fuel / Battery options
- IMR Vessel Toolkit Remains
- Potential for larger Crane Size and Module Handling
- Regulatory Requirements Driving Vessel Design for working in a Hydrocarbon Environment

Data Processing

IMR Data Volumes

- AUV/ROV Data Volumes
 - Increased resolution
 - Larger Datasets
 - Increased Processing
 - Increased Storage
 - Increased Cost?

One Hundred 3.5-inch Floppy Disks

Tomorrow's Solution Yesterday

- Going Back a few years
- Increased data and manpower for processing was already an issue
- Solutions
 - Onshore Processing
 - Large Data Centers
 - Reduced Cost
- Limitations
 - Remote from project
 - Bandwidth costs

Tomorrow's Solution Today

- AI in Your Pocket
 - Processing occurs today at rapid rates
 - AI has developed with software learning operating in vast data centers via the cloud
 - Transmission delays response time
 - Apps are being developed to remove delays
 - FB already uses deep learning to capture, analyse and process pixels / Google developer's now build AI into apps
- Deep Learning and Machine Learning is already being used to automate subsea data processing.

Summary

- Technology needs to deliver improved safety and reduced cost
- IMR Vessel Toolkit remains and needs to expand
- Vessels will come with alternative power sources
- Autonomy has a major role to play (Surface / Subsea / Processing)
- Technology is changing to meet the needs of huge consumer markets. The O&G industry is not centric to these drivers but we stand to benefit massively as a result.

Thank you!
