Solutions to Challenges in the Middle-East

What is Decommissioning?

Decommissioning: *The planned shut-down or removal of a Structure, Asset, equipment, etc., from operations.*

So, what does it mean in our industry?

UNCLOS uses the terms “Abandoned” or “Disused” installations, But in the Oil and Gas Industry Offshore we loosely use the general term “Decommissioning”. It is used as an all-inclusive term that describes the entire process associated with an asset’s end of life.

Long before a platform or subsea asset comes to the end of its useful production life, the decommissioning program needs to be considered.

General Decommissioning stages
