

Developments in Umbilical Technology for shallow water applications

Thursday 25 May 2023

1400-1530hrs GST | Online Conference

This event is free to attend, but booking is essential

Click to book or contact me@sut.org

Umbilical technology has developed significantly over recent years. Longer distances, higher pressures, chemical injection, hydraulic control, electric power, fibre optic, dynamic service - all feature in the challenges addressed by umbilical engineers.

This online conference will focus on the particular challenges faced in the Middle East market, where shallow waters and increasing demand for power from shore feature in current and future projects.

Aker Solutions – Case study - Long step out power umbilical in shallow waters.

JDR Cable Systems – SSIV umbilicals

Fibron – IWOCs umbilical systems

UMF – Fraser Thomson -
Balancing quality across umbilical manufacture and installation for project success

The presentations will be followed by a Q&A
